QUIZ 1

Course: Application Development with .NET (CT219H)

Duration: 150 minutes

Students are asked to develop a Blazor application to manipulate data.

DESCRIPTION

Each employee is stored the name, address, starting date of working, education (UnderGraduate, PostGraduate), department (Human Resource, Marketing, R&D) that the employee is working.

REQUIREMENTS

Database

- Design a database **Employees** to store those pieces of information of employees.
- Populate some employees to the database (at least 4).
- The database script is saved as *Employees.sql*.

Application

- Design a Blazor application (named as *EmployeeInfo*) allows:
    o List all employees.
    o Display details of an employee.

Copy *Employees.sql* to *EmployeeInfo* folder. Zip the folder and submit.

THE END
